

Across East African glaciers;: An account of the first ascent of Kilimanjaro

Excerpt from Across East African Glaciers:
An Account of the First Ascent of Kilimanjaro
In the matter of geographical exploration, which may be said to constitute the groundwork of the successful development of all countries, German East Africa has not hitherto shared the advantages enjoyed by our colonies on the western side of the continent. There, and more especially in our Protectorate of the Cameroons, the work of geographical research has been systematically carried out under Government supervision and at Government expense, whereas the exploration and exploitation of East Africa have been left entirely to the more limited resources of commercial companies. In all the expeditions which have penetrated the region since the first delimitation of the various spheres of interest, the interests of Geography and of Science in general have been of secondary importance to the making of treaties and the establishment of stations. It seemed to me, therefore, that, since Government showed no signs of moving in the matter, the work of geographical research in East Africa must be taken up by private individuals, I resolved to devote myself and my means to it forthwith; and in the course of three expeditions I have done my best to make known the districts geographically the most interesting and colonially the most valuable.
